Re: Revised Quote for Verus Pro. Automated Signature Verification with custom development and annual processing of two (2) million signature reads per year. Additional options have been added for the county to select from; Option B with three (3) million signature reads per year or Option C with four (4) million signature reads per year.

Verus Pro exchanges files with the inbound mail sorter by evaluating signature images captured from the mail packets and compares them to the reference images from the voter registration database. This solution consists of a server running the Verus Pro application while exchanging files with your voter registration system. Verus Pro is built to save time and ultimately move the ballots from the mail packets to tabulation.

The automated signature verification takes place by using the extracted signature image from the mail sorter and comparing it with the reference signature image from the voter registration system. For Verus Pro to perform, it is important the reference images in the voter registration database are 200 dpi or higher. It is understood the average dpi of signatures in the voter registration system maybe 150 dpi. It has also been discussed using previous mail packet images as updated reference images to achieve the 200-dpi specification in the voter registration database.

Some of the benefits to the County
- Integration with your Voter Registration system
- Audit reports of the signature match
- Faster signature verification processing (200 dpi or higher of the reference image is required) of approximately 1,200 per minute with a single Zeon 3.2 GHz processor
- Integrates with current sorting system used by the County and Runbeck
- Provides faster ballot preparation and earlier tabulation reporting
- Runbeck support
Note: This assumes images of signatures from the mail packets are captured by RES. It also assumes the reference image of the digital signature in the voter registration database is 200 dpi or higher.

We had a productive conference call on Wednesday, May 6, 2020. The proposal for development work has was accepted by the county on May 6th, 2020, and development has started. As of May 29, 2020, the county needs to select which pricing option to move forward with as it applies to signature reads (clicks) per year. Planned testing will occur during the month of June with acceptance of Version 2.0 by June 29, 2020 for use during the August Primary election season. Version 2.5 will be tested in August with acceptance by August 31, 2020 for use during the November General election season. The basic functionality in each version is described above.
